Product idea: E ovako kralju, radim aplikaciju za numeraciju brojeva u telekomu u Bosni Hercegovini, uz to se radi i regulativa. Dan 1: Uvod : I. Telekom numeriranj i regulativa u BiH II. Demo interne radne aplikacije (py fast API + JS frontend) . u prilogu Zadatak: I. Analizirati Telefonsku numeraciju i regzlativu na na adresi: <https://www.rak.ba/hr/telecom-numeration> a. Plan numeriuranja: <https://docs.rak.ba//documents/8e85c57b-fd57-4bf0-b0cf-4efae2f1bf09.pdf> b. Dodijeljeni blokovi brojeva <https://docs.rak.ba//documents/0bfd37c3-d7dd-4c88-aa9c-a0bf6bdbb9e4.xlsx> (uzeti u obzir samo geografske brojeve i numeraciju) II. Anlizirati Poštanske brojeve i urede u BiH prema statistici ispod a. Pokušati prikupiti objediniti poštanske urede i ubaciti ih u hijerarhiju ENTITET/ŽUPANIJE (ILI REGIJE za RS)/OPĆIN ili GRAD (excel), perema uputama ispod III. Analizirati hijerarhiju HT ERONET lokacija - Hijerarhije je iduća: OPĆINA->LOKACIJA->URED AJ (1 ili više)->NUMERACIJA (1 ili više) a. Uređaj je centrala (MSAN ili OLT) – naknadno dobijete popis IV. Inicijalni popis daljnjeg razvoj i novih funkcionalnosti aplikacije Ovo su moji zadaci, reci mi mozes li otvoriti ove dokumente Iz Bosne i Hercegovine meni samo treba Republika srpska <https://xn--potanske-brojeve-med.cybo.com/bosna-i-hercegovina/republika-srpska/#listcodes> Evo ti i kompletan popis za republiku srpsku https://bs.wikipedia.org/wiki/Spisak_po%C5%A1tanskih_brojeva_u_Bosni_i_Hercegovini Aj mi sad reci sta si razumio od ovog i mozes li sve linkove otvoriti i onda cu ti reci kako cemo dalje Dakle meni je potreban dio aplikacije koji obuhvaca Republiku srpsku i Distrikt Brčko za HT Eronet Mostar d.d. Dakle aplikacija mora raditi sljedeće. Kad korisnik dodje uzeti novi broj. Aplikacija mu Automatski dodjeljuje Slobodan broj iz bloka brojeva koji je predviđen za tu lokaciju, dakle treba mi i popis postanskih brojeva i RAK-ovi dodijljeni brojevi za to mjesto

Product Requirements Document: NumberAssigner - Telekom Number Management System

Problem Statement

Internal staff at HT Eronet Mostar d.d. in Republika Srpska and the Brčko District face challenges in efficiently managing and assigning telecommunication numbers. They need a system that automates the process of assigning available numbers based on regulatory guidelines and geographic regions, while ensuring compliance with local regulations and providing robust reporting and audit capabilities.

Goals & Success Metrics

Goals

1. Automate the assignment of available telecommunication numbers.
2. Ensure compliance with RAK regulations and numbering plans.
3. Integrate postal codes and geographic regions for accurate number assignment.
4. Provide comprehensive reporting and audit logs for regulatory purposes.
5. Enhance operational efficiency and reduce administrative workload.

Success Metrics

1. 99% accuracy in number assignment based on regulatory guidelines and geographic regions.

2. 95% user satisfaction in the internal beta testing phase.
3. 100% compliance with RAK regulations and numbering plans.
4. 90% reduction in time spent on manual number assignment.
5. 95% of users report that the system meets their regulatory reporting needs.

User Stories

1. **As an internal staff member**, I want the system to automatically assign a free number from the appropriate block based on the user's location to ensure quick and accurate number allocation.
2. **As an internal staff member**, I need the system to integrate postal codes and geographic regions to ensure that assigned numbers are correct and comply with regulations.
3. **As a regulatory compliance officer**, I need the system to generate comprehensive reports and audit logs to demonstrate compliance with RAK regulations and numbering plans.
4. **As an internal staff member**, I want to be able to view and manage the block of numbers assigned to specific locations to ensure no overlaps or misassignments.
5. **As a system administrator**, I need the ability to add, update, and delete postal codes and geographic regions to keep the system up-to-date with regulatory changes.

Functional Requirements

1. User Authentication and Roles

- User login with role-based access control (RBAC) for internal staff and administrative users.
- Roles: Internal Staff, Regulatory Compliance Officer, System Administrator.

2. Automatic Number Assignment

- Automatically assign an available number from the appropriate block based on the user's location.
- Ensure the assigned number is from the RAK-allocated blocks for the specific location.

3. Integration with Postal Codes and Geographic Regions

- Integrate postal codes and geographic regions (Entities, Županije/Regions, Općine or Grad).
- Use the provided RAK documents for phone number allocation and postal code data.

4. Compliance and Reporting

- Generate comprehensive reports and audit logs for regulatory compliance.
- Reports should include number assignments, usage, and compliance with RAK regulations.

5. Number Management

- View, add, update, and delete phone number blocks for specific locations.
- Ensure no overlaps or misassignments in the number blocks.

6. User Interface

- Provide a user-friendly interface for internal staff to request and manage phone numbers.
- Include a dashboard for administrators to oversee the system and manage configurations.

Non-Functional Requirements

1. **Performance**

- The system should handle up to 100 concurrent users without performance degradation.
- Number assignment should be completed within 2 seconds.

2. **Security**

- Implement secure user authentication and authorization.
- Ensure data is encrypted both at rest and in transit.

3. **Scalability**

- The system should be scalable to handle future growth in the number of users and locations.

4. **Reliability**

- The system should have a 99.9% uptime with a maximum of 4.32 minutes of downtime per month.
- Implement regular backups and disaster recovery procedures.

5. **Compliance**

- Ensure the system complies with RAK regulations and local data protection laws.

Open Questions

1. What specific reporting requirements do regulatory compliance officers have?
2. Are there any additional geographical regions or postal codes that need to be included?
3. What are the specific user roles and permissions for each role?
4. Are there any specific integrations with other systems or platforms required?
